" Khul Ja Sim Sim !! " (Open Simsim)

Those were the magical words Ali Baba had to utter to open the cave full of treasure !

I know you have been eagerly waiting for the Treasure Hunt ! And as I promised it would be worth the wait, as well as fun to do.

To unlock the treasure completely, there are four doors to open in total. And each requires you to know atlease one new skill

Skills for each Door

Door 1 : To open this, you should be able to launch a container given an image with a tag and command to run. You should also be able to check the logs and watch those continuously.

Door 2 : To open this door, you should know how to copy a file from inside a container given a path.

Door 3 : To open this door to the treasure, you should know how to connect and interact with a running container. You should also know basic linux utilities.

Door 4 : Once you open Door3, you would get a code to open door4 where you could avail the one time offer on

The Treasure

by the time you open door4, and I am positive you would, you should have unlocked the following treasures,

- A "Docker Zealot Badge", which you could flaunt socially. And its the first milestone on your way to be a Docker Champion. You could find the description about this badge at https://api.badgr.io/public/badges/docker-zealot
- Limited time, exclusive offer on our Zero to Docker program, a comprehensive program to master Docker with a Certification Path

Most importantly, the idea behind this game is to motivate you and also make you interested in learning how to run containers and work with docker.

Get set Go !!

Here is how you get started with the Treasure Hunt,

Step 1 : Launch a container in detached mode with the folowing specs
image : schoolofdevops/dockerth

version   : v2.6

command/app : simsim

Step 2 : Start watching/tailing the logs continuously for the container created above. Your clue will be found here. And yeah, you need to be patient as it will appear only once a while in the logs. And unless you have launched the container with exact image tag and application, you can not unlock the first clue. You keep following the clues and unlock one door after other.

Good luck, and remember to have fun while learning.
